ovie Introducing food freshness tracking Ovie LightTags

WHEN INDEPENDENCE IS ON THE LINE, OVIE LIGHTTAGS HELP MASTER MEALTIME.

Eat today!

Don't eat.

The LightTag changes colors from teal to yellow to red as time passes.

Yellow signals urgency to use before it goes bad.

When it turns to red, anyone who opens the fridge knows not to eat it.

ONE SIMPLE TECHNOLOGY.

LightTags work by tracking time so when you're encouraging independence, there are two simple ways to implement a LightTag system in the fridge.

Food safety

Tag leftovers and opened items to make sure that expired foods don't get eaten.

Meal planning

Tag prepared meals so that the yellow is the signal for what to eat each day.
